ARDEX S28 ARDEX S28 W

MICROTEC Rapid Hardening and Rapid Drying Semi-Pourable Natural Stone Floor Tile Adhesives

Features

- MICROTEC fibre reinforcement for high performance
- Rapidry Formula minimises the risk of water staining, curling and warping in moisture sensitive natural stones
- Semi-pourable consistency ideal for solid bed fixing large format floor tiles and slabs
- Can be trafficked and grouted 2 hours after fixing, regardless of bed thickness
- Achieves an open time of up to 30 minutes
- High yield – 6m² @ 3mm
- Up to 60 minute pot life
- ARDEX S 28 W is ideal for fixing light and translucent marble and other types of natural stones

RAPIDRY

Binds the mix water within the mortar, speeding drying and hardening times irrespective of application thickness

ARDEX S28 / ARDEX S28 W

MICROTEC Rapid Hardening and Rapid Drying Semi-Pourable Natural Stone Floor Tile Adhesives

DESCRIPTION

ARDEX S28 and ARDEX S28 W are rapid hardening and rapid drying tile adhesives with specific properties for fixing moisture sensitive natural stone floor tiles, as well as porcelain, mosaics, fully vitrified and ceramic tiles, in internal dry locations.

ARDEX S28 and ARDEX S28 W have a unique semi-pourable consistency ideal for fixing large format floor tiles.

USE

ARDEX S28 and ARDEX S28 W incorporate ARDEX Rapidry Technology meaning that the mix water is totally bound into the hardened adhesive which virtually eliminates the risk of water staining of moisture sensitive natural stone tiles, or the mix water affecting wooden substrates. ARDEX S28 W is ideally suited to fixing translucent stones and natural stone where a light coloured background bed may be required.

The designation C2 FTE S1, in accordance with BS EN 12004, classifies ARDEX S28 and ARDEX S28 W as 'improved fast setting cementitious adhesives with reduced slip and extended open time.'

The additional characteristics of ARDEX S28 and ARDEX S28 W, determined in accordance with the test standards listed in BS EN 12004 are a tensile adhesion

strength of greater than 1 N/mm² adhesion value. The mixed mortar has an extended open time of up to 30 minutes, and an easily workable, semi-pourable consistency to facilitate the solid bed fixing of large format floor tiles.

ARDEX S28 and ARDEX S28 W adhere strongly to most construction materials such as concrete, cement and sand screeds, heated sub-floors, anhydrite screeds, and existing ceramic tiled surfaces.

SURFACE PREPARATION

The backgrounds and surfaces to receive the tiles must be clean, firm, free of dust, dirt, oil, grease and other barriers to adhesion. Ensure that the background has adequate drying time, as given in the relevant part of BS 5385-3:2007, prior to fixing the tiles.

Install tiles in accordance with the relevant parts of BS 5385 and BS 8000: Part 11 Workmanship on Building Sites. Backgrounds to receive ceramic tiles should be finished to Surface Regularity 1 i.e. so any gap under a 2m straight edge does not exceed 3mm.

ARDEX S28 and ARDEX S28 W can be applied to dry or moist surfaces, but moisture sensitive materials must be dry and remain dry after fixing.

MIXING

ARDEX S28 and ARDEX S28 W powder is added to clean water in a clean container whilst stirring and mixed thoroughly to give a semi-pourable, easily worked mortar. The use of an ARDEX mixing paddle with a 10mm chuck, variable speed electric drill makes light work of mixing. The mix proportions by volume are approximately:

3.5 parts ARDEX S28 or ARDEX S28 W powder to 1 part water. A 20kg bag of ARDEX S28 or ARDEX S28 W requires approximately 6.6 litres of water.

Do not exceed the maximum water content. The consistency of the adhesive can be adjusted to suit site conditions and the materials being fixed. The mortar should be applied at temperatures above 5°C. The pot life of the mixed mortar is approximately 45 to 60 minutes at 20°C.

APPLICATION

The mixed mortar is applied to the prepared surface with a trowel and then combed through with a suitably sized notched trowel in straight ribs to give a ribbed mortar bed. The tiles should be fixed within the open time of the applied adhesive and pressed into place with a twisting and sliding action ensuring solid bed fixing is achieved.

ARDEX S28 and ARDEX S28 W are classified as having an extended open time of not less than 30 minutes with freshly mixed material when measured in accordance with BS EN 12004. For optimum performance under typical UK site conditions tiles should be fixed within 20 minutes, and can be adjusted for up to 15 minutes at 20°C.

GROUTING

Grouting can proceed once the tile bed has hardened sufficiently so that the tiles will not be dislodged.

When grouting floor tiles ARDEX S28 and ARDEX S28 W is normally hard enough after 2 hours, at 20°C, to accept foot traffic depending on the porosity of the tile and the background.

Higher temperatures will shorten and lower temperatures will lengthen these times. The tile joints should be grouted with the appropriate ARDEX-FLEX Tile Grout. For moisture sensitive natural stones consider the use of ARDEX MG Grout to reduce the risk of picture framing and water staining.

COVERAGE

A 20kg bag of ARDEX S28 and ARDEX S28 W will yield approximately 18.1 litres of mortar, using approximately 1.1kg of powder per m² per mm thickness of adhesive bed.

The actual coverage achieved in practice will depend on the back profile of the tile, notched trowel and technique used to bed the tiles e.g. a 20kg bag of ARDEX S28 or ARDEX S28 W will cover approximately 6m² at 3mm thickness.

PRIMERS

ARDEX P51

Concentrated Water-Based Primer and Bonding Agent for use on absorbent backgrounds, concrete and anhydrite/ calcium sulfate screeds prior to the use of ARDEX S28 or ARDEX S28 W adhesive. Dilute ARDEX P51 1:3 with water.

ARDEX P4

Ready Mixed, Multipurpose, Rapid Drying Primer for use on ceramic and porcelain tiles, concrete and terrazzo. ARDEX P4 Primer is solvent free and dries after 60 minutes.

ARDEX P82

Non-Flammable, Water-Based, Synthetic Primer for use on smooth, impervious surfaces including existing ceramic tiling, internal asphalt, terrazzo, sound and well adhered paint coatings, and old adhesive residues prior to the use of ARDEX S28 or ARDEX S28 W.

GUIDANCE NOTES ON BACKGROUNDS TO BE TILED Concrete

Allow at least 6 weeks, preferably at least 12 weeks drying time prior to fixing tiles onto new concrete. Mechanically clean concrete and ensure curing agents and other barriers to adhesion are removed.

Cement/sand screed

Wood float finish and prevent rapid drying of the surface for 7 days. Allow to air dry for at least 3 weeks prior to tiling. NOTE FOR SCREEDS: With an ARDEX A38 cement/sand screed, tiles can be fixed after only 4 hours.

ARDEX S28 / ARDEX S28W

MICROTEC Rapid Hardening and Rapid Drying Semi-Pourable Natural Stone Floor Tile Adhesives

Wood-based sheets and boards

NOTE: As of May 2024 Plywood/Timber is not a suitable base for tiling directly to on walls or floors -BS 5385 -3: 2024

Option 1 - Overlay with a suitable tilebacker board of appropriate thickness and fixed as per manufacturers instructions.

Option 2 - An uncoupling matting such as ARDEX Flexbone VA/2E* can be selected providing that the plywood/timber floor is:

- the correct grade
- sufficiently dry, rigid and stable able to carry all anticipated static and dynamic loads without deflection
- have adequate ventilation below
- flat and level (SR1)
- Securely fixed (screwed to joists at 300mm centres, including any cross-noggins, if necessary)

When installing bonded uncoupling mattings down to the surface of the timber with AF 200 Plus*, it should be prepared to receive the adhesive. Sanding of the timber surface may be required to ensure any surface coatings are removed, e.g. varnish, lacquers, etc. *Refer to the relevant product data sheet for further advice.

NOTE: BS 5385-1 advises that plywood and other wood-based sheets or boards should not be used for direct tiling to walls.

Timber-based sheets or boards should be replaced or over sheeted with plasterboard, or suitable tile backer board.

Painted surfaces

A trial area should be carried out by priming the sound paint coating with ARDEX P 82 primer prior to fixing the tiles in ARDEX S28 or ARDEX S28W.

Calcium Sulfate-based screeds

i.e. Anhydrite

Ensure they have been laid and prepared in accordance with the manufacturers' recommendations. Generally they require sanding and must have a moisture content of 0.5% or less measured using the carbide method. Prime with ARDEX P 51, diluted with 3 parts of water. Existing glazed ceramic tiling Ensure existing tiling is well adhered and can support the new tile bed.

Thorough cleaning and rinsing off is essential. Prime tiles with ARDEX P 82 or ARDEX P 4 Primer.

Asphalt sanded (Internal Areas) With well adhered sand key no primer is required. If sand key is poor or worn off, proceed as for smooth asphalt.

Asphalt smooth (Internal Areas) Priming with ARDEX P82 recommended.

Underfloor heating

ARDEX S28 and ARDEX S28W are suitable for fixing ceramic tiles to concrete or cement and sand screeds with underfloor heating. When fixing uncalibrated stone to either concrete or cement and sand screeds the adhesive can be used up to 15mm thick.

PACKAGING

ARDEX S28 and ARDEX S28W are packed in paper sacks incorporating a polyethylene liner - net weight 20kg.

STORAGE AND SHELF LIFE ARDEX S 28 and ARDEX S 28 W must be stored in unopened packaging, clear of the ground in cool dry conditions and be protected from excessive draught.

If stored correctly, as detailed above, the shelf life of this product is 12 months from the date shown on the packaging.

PRECAUTIONS

ARDEX S28 and ARDEX S 28 W are considered non-hazardous in normal usage. The presence of cement in the product gives an alkaline mortar which may cause some local irritation if prolonged contact with the skin takes place. Care should be taken to avoid inhalation or ingestion of dust and prevent contact with the eyes.

For further information consult the relevant health and safety data sheet.

TECHNICAL DATA

Weight of fresh mortar approximately 1.4kg/litre

Working time (20°C) approximately 45-60 minutes

Adjusting time (20°C) approximately 15 minutes

PROPERTIES TESTED TO BS EN 12004

Open Time: approximately 30 minutes

Tensile Adhesion Strength: (28 days dry) 1.0-2.0 N/mm²

(28 days wet) 1.0-2.0 N/mm²

(After Freeze-Thaw) 1.0-1.5 N/mm²

(6 hours dry) 0.5 N/mm²

PROPERTIES TESTED TO BS EN 12002

Transverse Deformation: Classification S1 (Deformation greater

than or equal to 2.5mm and less than 5mm).

NOTE: The information supplied in our literature or given by our employees is based upon extensive experience and, together with that supplied by our agents or distributors, is given in good faith in order to help you. Our Company policy is one of continuous Research and Development; we therefore reserve the right to update this information at any time without prior notice. We also guarantee the consistent high quality of our products; however, as we have no control over site conditions or the execution of the work, we accept no liability for any loss or damage which may arise as a result thereof.

Country specific recommendations, depending on local standards, codes of practice, building regulations or industry guidelines, may affect specific installation recommendations.
